Of the 212 forms returned, 205 identified the type of SATOP program.

Sample Size

Information is based on the number of returned forms and the number of people served according to the DMH billing records. The forms sent to the agency did not indicate program type (e.g., WIP). The program type was to be entered on the form as the forms were distributed. Many forms, however, were received with the program type not indicated. Since an accurate count of forms received by individual programs cannot be calculated, this column is left blank.

Of the 212 forms returned, 205 identified the type of SATOP program.

*A return rate could not be calculated due to the State not being able to determine the number of persons served.

Medicaid

In 2002, the Consumer Satisfaction Survey asked questions about Medicaid. The results of those questions are below and represent the percentage of affirmative answers. In addition, consumers were asked to identify which MC+ plan they carried. Eight people reported having an MC+ plan, and four noted the plan they used. The plans identified were *Blue Care, FHP, Firstguard, and MC+.*

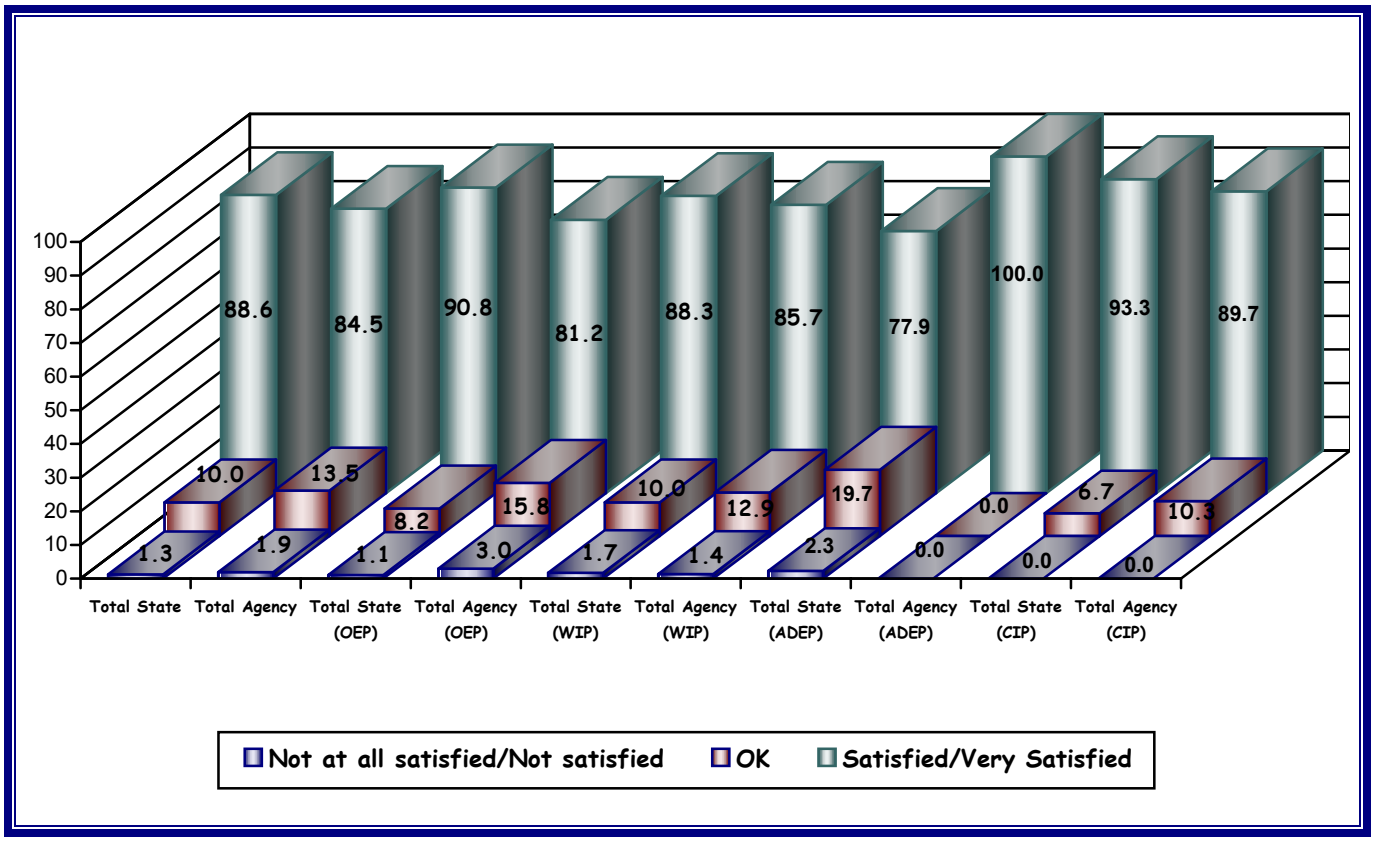
Overall Satisfaction with Services



Program Satisfaction: Percent of responses to the question "How satisfied are you with the services you receive?"

Some of the key findings were:

- **Statewide, 88.6% of the consumers of SATOP services who responded to the survey were "satisfied" or "very satisfied" with the services they received.**
- **The percent of individuals at this agency, who rated services as "satisfied" or "very satisfied", was lower than the state average (84.5% for this agency versus 88.6% for the state).**
- **This agency's ADEP program was rated higher (100.0% of the consumers reporting "satisfied" or "very satisfied") than the statewide ratings (77.9%); however it should be noted that only one person was counted in the ADEP program.**

Comparison of 1998, 1999, 2000, 2001, and 2002 Mean Ratings

Some of the key findings were:

- **The mean of the responses from this agency's consumers to the question " How satisfied are you with the services you received?" was 4.30 in 1998, 4.45 in 1999, 4.32 in 2000, 4.32 in 2001, and 4.23 in 2002.**
- **For this agency, the mean to the service question decreased from 2001 (mean= 4.32) to 2002 (mean= 4.23).**

Scale (items 13-14): 1=Not at all safe . . . 5=Very safe.

The number in parentheses represents the number responding to this item.

[a]The number of consumers in each program may not add to the total number of consumers served because the type of program (e.g., WIP) was not indicated on many forms.

Some of the key findings were:

- **Statewide, the people served by the SATOP programs reported that they were satisfied with the services they received. For this agency, the mean scores ranged from 4.00 to 4.61.**
- **The people were most satisfied with the counselor/instructor. They were least satisfied with the location of the agency.**

The first number represents the percent that answered "Yes".
The number in parentheses represents the number responding to this item.

Some of the key findings were:

- **Three-fourths of the participants reported that they were told about their right to a second opinion (75.1%).**
- **Over half of the participants reported that they were told about the six month shelf-life rule (55.2%).**

It is important to note the answers to questions 23-25 do not necessarily reflect the performance of this agency, as clients are sometimes assessed at other agencies.

Previous Feedback

The last page of the survey offered people the opportunity to address any issues by writing in comments. These hand-written comments were copied and faxed back to your agency as they were received. The primary purposes for this action was to allow for immediate feedback from the people you serve, to give you the opportunity to make any necessary improvements, and to pass along compliments to your staff.

Sampling Methodology

Consumer Satisfaction Forms were given to people served by ADA and CPS during April 2002. SATOP clients completing services during April of 2002 were asked to complete the SATOP Consumer Satisfaction Survey. For MRDD, data was collected through interviews.
People who received services from more than one program or agency received more than one survey. Therefore, some people completed more than one survey.
While this method may not have achieved a sufficient sample size to represent the opinions of all people who receive services from each provider, the survey has provided people with an opportunity to express their opinions and concerns. Giving the majority of people who receive DMH services a quick and simple way to express opinions and concerns about service quality is a major aim of this process.

Use of Data and Quality Improvement

The methods of data collection, the survey content and the survey results should all be considered in terms of quality improvement. The Missouri Department of Mental Health Satisfaction Survey has been designed as a quality improvement process, not as traditional mental health research.

There are two primary uses of this data. First, this data gives the Department of Mental Health an expression of the level of satisfaction of the people served by the Missouri DMH system as a whole.

Second, this data is designed to support quality improvement processes at the provider level. Each provider will have a basis upon which to compare the level of satisfaction of the people who receive services at their agency with other providers of their type and the state as a whole. This comparison makes it possible for each provider to improve the quality of the services they offer. In addition, each provider can get a clear idea of some of the issues that are important to the people they serve.

It is important to understand the context of services at each agency when interpreting the meaning of survey results. Differences in the population served at each agency, variations in service provision, and particular cultural characteristics of the community in which services take place must be taken into account as providers use this information to improve the quality of services. This report does not attempt to take into account these variations. As your agency engages in quality improvement, it is your responsibility to understand and take into account these local variations in order to make the most of the information contained within this report.

Please forward any suggestions for improvement of the survey process to Gary Harbison, Outcomes, Missouri Department of Mental Health, PO Box 687, Jefferson City, Missouri 65102. Additional information about survey results may be obtained by contacting Christine Rinck, Ph.D., University of Missouri-Kansas City Institute for Human Development, 2220 Holmes, 3rd Floor, Kansas City, Missouri 64108.
